Risk Indicator (Source : Fund Admin)

Lower Risk

Higher Risk

⚠ The SRI represents the risk and return profile as presented in the Key Information Document (KID). The lowest category does not imply that there is no risk. The SRI is not guaranteed and may change over time. The risk indicator assumes you keep the product for 5 years. The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movement in the markets or because we are not able to pay you.

	1 year	Inception to date *
Portfolio volatility	12.15%	13.85%
Benchmark volatility	11.65%	13.66%
Sharpe ratio	1.96	1.06

* Volatility is a statistical indicator that measures an asset's variations around its average value. For example, market variations of +/- 1.5% per day correspond to a volatility of 25% per year. The higher the volatility, the higher the risk. The Tracking Error indicator measures the performance's difference between the fund and the benchmark

* Source : Amundi. The above cover complete periods of 12 months for each calendar year. **Past performance is no predictor of current and future results and does not guarantee future yield**. Any losses or gains do not take into consideration any costs, commissions and fees incurred by the investor in the issue and buyout of the shares (e.g. taxes, brokerage fees or other commissions deducted by the financial intermediary). If performance is calculated in a currency other than the euro, any losses or gains generated can thereby be affected by exchange rate fluctuations (both upward and downward). The discrepancy accounts for the performance difference between the portfolio and the index.

We have classified this product as 4 out of 7, which is a medium risk class. This rates the potential losses from future performance at a medium level, and poor market conditions could impact our capacity to pay you. Additional risks: Market liquidity risk could amplify the variation of product performances. This product does not include any protection from future market performance so you could lose some or all of your investment. Beside the risks included in the risk indicator, other risks may affect the Sub-Fund's performance. Please refer to the AMUNDI ETF ICAV prospectus.

Index Data (Source : Amundi)

Description of the Index

The Index is an equity index based on the MSCI World Index ("Parent Index"), representative of the large and mid-cap securities of the 23 developed countries and issued by companies that have the highest Environmental, Social and Governance (ESG) rating in each sector of the Parent Index. Equities comprised in the Index are selected by applying a combination of values based exclusions and a best-in-class selection process to companies in the Parent Index. The methodology aims to include the securities of companies with the highest ESG ratings making up 50% of the market capitalization in each Global Industry Classification Standard (GICS) sector of the Parent Index.
